

Differences Between UCR and LIBRS 2.5

The Uniform Crime Reporting (UCR) system has been in use since 1929, pre-dating electronic reporting of criminal justice data and, consequently, is designed primarily for a pencil and paper world. LIBRS (Louisiana Incident-Based Reporting System), on the other hand, is designed to use computer networks to collect detailed crime data in compliance with the FBI's NIBRS (National Incident-Based Reporting System).

UCR

A major difference between LIBRS and the traditional UCR system is the degree of detail in reporting crime data. With UCR, law enforcement agencies tally the number of occurrences of Part I offenses, as well as arrest data for both Part I and Part II offenses, and submit aggregate counts of the collected data in monthly summary reports either directly to the FBI or indirectly through the Louisiana Commission on Law Enforcement (LCLE). The traditional UCR Program can thus be best described as a *summary reporting system*. The types of data tallied include counts of:

- Offenses
- Clearances
- Types and Values of Stolen and Recovered Property
- Age, Sex, and Race of Arrestees.

Expanded data are also be collected on Homicides (i.e., Murder and Nonnegligent Manslaughter, Manslaughter by Negligence, and Justifiable Homicide) through the use of Supplementary Homicide Reports. Furthermore, there are no requirements to tie arrests and exceptional clearances back to previously submitted incident reports.

LIBRS

In LIBRS, law enforcement agencies collect detailed data regarding individual crime incidents and arrests and submit them in separate reports using prescribed data elements and data values to describe each incident and arrest. Therefore, LIBRS is *incident-based reporting*, involving the collection of 70 data elements used to describe the victims, offenders, arrestees, and circumstances of crimes.

In LIBRS (as well as the FBI NIBRS system) there are two types of data elements, *mandatory* and *optional*. Data **MUST** be entered into mandatory data elements in reports submitted to LIBRS (and ultimately NIBRS), or the reports will be rejected as containing an error. (For example, a number must be entered into Data Element 2 (Incident Number)). Whether data are entered into optional data elements is up to the discretion of the submitting agency, so the absence of data in them will not cause rejections. (For example, no entry is required for Data Element 29 (Ethnicity of Victim)).
